10/10/85

Caswell No(s)..:

849 A

To: Henry Jacoby, P.O. No 21Registration No(s)..: 618-75 (Merck 340-F)Pesticide Petition No(s)..: 5 G 3258Chemical(s): Thiabendazole 2-(4-thiazolil) benzimidazoleRequested Action(s): Merck, Sharp and Dohme requests a temporary tolerance for the use of Thiabendazole fungicide to treat *Aspergillus spp.* and *Penicillium spp.* on stored corn grain at 20 ppm.Recommendation: Toxicology Branch has sufficient toxicity data in support for the safety to this residue level on corn grain, but defer to RCB regarding secondary residues in meat, fat and meat by products resulting from this use.Inert(s) cleared 180.1001: Yes% of ADI occupied: Existing: 46.92 Resulting: 51.92Resulting % increase in TMRC: 10.7%Data considered in setting the ADI: Please, see attached summary of toxicity data considered in setting this action. Refer to the enclosed ADI printout.Attached (?): ADI printout: YES/NO; TOX "one-liner": YES/NO; DER: YES/NOExisting regulatory actions against registration: NonePAR status: NoneNew Data: NoneData gaps: Sensitization studyComments: The established 0.4ppm milk tolerance will be adequate to cover FBZ residues from proposed use (RCB, Liung Cheng, 9/10/85).Reviewer: Carlos A. Rodriguez Date: 10/4/85 10/85Section Head: Jane C Harris 10/4/85 Branch Chief: Robert W. S. 10/6/85

Toxicity Data Considered in Setting This Action:

- Acute oral LD<sub>50</sub> (male rat) = 3.97 g/kg  
(95% Conf. = 2.92 - 2.40 g/kg)
- Acute oral LD<sub>50</sub> (female rat) = 3.54 g/kg  
(95% Conf. = 2.14 - 5.85 g/kg)
- Acute oral LD<sub>50</sub> (mouse) = 3.8 g/kg
- 2-Year rat feeding: Systemic NOEL = 10 mg/kg/day.  
Systemic LEL = 40 mg/kg (growth depression)  
Oncogenic potential - negative at 160  
mg/kg/day (highest dose tested)  
Dose levels tested: 10, 40 and 160 mg/kg/day.
- 2-Year dog feeding: Systemic NOEL = 50 mg/kg/day;  
Systemic LEL = 125 mg/kg/day (decreased  
body weight).  
Dose levels tested: 20, 50 and 125 mg/kg/day.
- Lifetime oncogenic (mouse feeding) - Oncogenic NOEL >  
5,330 ppm or 800 mg/kg/day (highest  
level tested)  
Systemic NOEL = 600 ppm or 100 mg/kg/day  
Systemic NOEL ~~LEL~~ 2000 ppm or 300 mg/kg/day -  
lower weight gain.  
Dose levels tested 660 ppm (100 mg/kg/day),  
2000 ppm (300 mg/kg/day), 5,330 ppm  
(800 mg/kg/day).
- Rat Teratology: Teratogenic NOEL > 80 mg/kg/day (given  
by gavage, single dose tested)  
Maternal NOEL - < 80 mg/kg (only dose tested)  
- lower mean implantation sites.
- Rabbit teratology: Teratogenic NOEL > 800 mg/kg/day.  
(highest dose tested).  
Dose levels tested: 100, 200, 400 and  
800 mg/kg/day.  
Maternal NOEL: 100 mg/kg  
LOEL: 200 mg/kg - weight loss.
- 3-Generation reproduction (rat) - Reproductive NOEL =  
20 mg/kg, reproductive LOEL = 40 mg/kg -  
decreased viability index of Fla.  
Dose levels tested: 20, 40 and 80 mg/kg.
- Mutagenicity Studies:
  1. Microbial (S. typhimurium) negative for induced revertants.
  2. Microbial (E. coli) negative for induced revertants.
  3. Host-mediated - negative
  4. In vivo Bone marrow - negative for chromosomal damage.
  5. Primary Bacterial DNA damage/repair - negative.

6. In vitro cytogenetics - negative - no increase in chromosome breakage in human embryonic fibroblast cultures.
- Metabolism, absorption, distribution and excretion in man, dog, rat, sheep, goat, cattle and swine:

Rapidly metabolized in man. Radioactive agent in animal species in many respects were similar to those found in man. Tissues from laboratory animals were virtually free of radioactivity.

File last updated 2/21/85

## ACCEPTABLE DAILY INTAKE DATA
